

## Standard Floor Stock Lines Available

### **Loose Mixes:**

#### **Poddy**

Starter feed for calves raised on milk

#### **Baby Weaner Feed**

Yard feed for weaners >60—70kg and to be fed with adequate roughage

#### **Weaner Feed**

Yard feed for weaners 80+Kg and to be fed with adequate roughage

#### **Small Weaner Lick**

Paddock supplement for weaners 110—150kg

#### **Large Weaner Lick**

Paddock supplement for weaners 150—200kg

#### **NQ Starter Lick**

Low urea content paddock supplement for all adult animals and weaners >180kg

#### **NQ Breeder Lick**

30% urea content paddock supplement for all adult animals both wet and dry

#### **NQ Wet Season & CQ Wet Season Licks**

High phosphorus content wet season paddock supplement for all animals

#### **Stockmans Horse Feed**

Palatable, nutritionally balanced complete horse feed for breeding, performance and station horses

#### **BH Equine Lick**

Calcium concentrated mineral and protein paddock supplement for the control of Big Head in horses

### **Molasses Mixes:**

#### **M3U Production**

Production mix for high growth/weight gains for weaners and steers

#### **M4U + R**

Molasses maintenance supplement for weaners

#### **M8U + R & M8U + R + P**

Molasses maintenance supplement for animals >180kg

Stocklick Trading's  
Product Guide

[www.stocklicktrading.com.au](http://www.stocklicktrading.com.au)

## CUSTOM WET SEASON LICK

### High phosphorous supplements for breeders and dry stock in the wet season.

Wet season loose licks provide extra phosphorous and minerals in regions where phosphorous deficiency stifles reproduction rates, milk production and often leads to skeletal problems and diseases such as Botulinum.

Many producers consider that supplying extra phosphorous in wet season is essential in achieving economic sustainability. Phosphorous supplements are considered to be the best "value for money" inputs when fed over multiple seasons with heifers. First calf heifers and breeders particularly benefit from wet season supplementation.

**Typical Daily Intake:** 50 to 100 grams/head/day

#### Typical Feed Analysis:

Min Total Protein	35%
Maximum Salt	25%
Urea Equivalent	12%
Min Phosphorus	10%
Min Calcium	12%
Min Sulphur	0.15%
Vitamins A, D & E; Essential Trace Minerals	

## MOLASSES PRODUCTS

### High energy liquid supplements for all seasons.

Stocklick's molasses based maintenance rations supply high energy supplements ideal for situations that require increased growth rates or survival rations in the hardest of dry seasons. These mixes are used to accelerate weight gain or reduce weight loss as energy and protein levels in pastures deteriorate beyond acceptable levels.

Stocklick's molasses based production rations are designed for maximum growth and/or weight gain over shorter time frames. A viable alternative for finishing animals prior to market or ensuring maximum growth rates at and post weaning. Often described as "rocket fuel for cattle", our customers often comment that strategic use of Stocklick molasses production mixes can reduce the time to reach target weights by six months or more. More user friendly than feedlotting and more cost effective than weaner pellets.

**Typical Daily Intake:** 1 to 2 kilograms/head/day

#### Typical Feed Analysis:

Min Total Protein	27%
Urea Equivalent	8%
Min Phosphorus	0.3%
Min Calcium	0.8%
Min Sulphur	0.65%

## CUSTOM PRODUCTION MIXES

### Balanced protein and energy mixes designed to increase liveweight gains.

It is becoming common practice to turn cattle off pasture at a younger age but at a heavier weight to attain premium prices. Increased growth rates and weight gains are achieved through strategic use of customised production loose mixes that are balanced in protein, energy and vital minerals. Designed to be fed either for the life of the animal or as a finisher ration prior to sale. Stocklick's production mixes also provide a great alternative to molasses production mixes.

**Typical Daily Intake:** 0.5% of body weight

#### Typical Feed Analysis:

Min Total Protein	30%
Maximum Salt	5%
Urea Equivalent	4%
Min Phosphorus	0.6%
Min Calcium	2%
Min Sulphur	1%

Vitamins A, D & E; Essential Trace Minerals; Rumensin 100

## HORSE LICKS AND FEEDS

### Concentrated mineral and protein mixes for all types and activity levels of horses.

Stocklick has three different horse mixes available:

A complete feed of protein, energy, fibre, vitamins and minerals for working horses that won't cause excitability (a calm feed).

A free access loose lick formulated to supply high levels of calcium and other minerals required to prevent the effects of big head in horses grazing buffel grass pastures.

A loose concentrate mix to add to straight molasses to provide protein and energy to maintain the horse's body condition during the dry season or for a quick pick up before being put back to work.

**Typical Daily Intake:** 200 - 500 grams/head/day

#### Typical Feed Analysis:

Min Total Protein	9%
Min Phosphorus	5%
Min Calcium	15%
Min Sulphur	0.9%

Vitamins A, D & E; Essential Trace Minerals

## CUSTOM WEANER LICKS AND FEEDS

### Balanced protein and energy mixes for young, growing cattle.

Customised weaner loose licks and feeds are designed to contain higher levels of crude protein in a balanced ration for young animals at different stages of development and under varied environmental conditions, to ensure maximum developmental growth. This leads to a reduced age at turnoff or conception resulting in improved profits.

Rumensin 100 is included in all weaner rations to improve efficiency, growth rates and most importantly to prevent Coccidiosis (scours) in early-weaned calves.

**Typical Daily Intake:** 250-2000 grams/head/day

#### Typical Feed Analysis:

Min Total Protein	17%
Maximum Salt	0.5%
Urea Equivalent	1%
Min Phosphorus	0.5%
Min Calcium	1%
Min Sulphur	0.15%

Vitamins A, D & E; Essential Trace Minerals; Rumensin 100

## CUSTOM DRY SEASON LICK

### High protein supplements for breeder cattle in the dry season.

Dry season loose lick products provide essential extra protein and minerals needed to enable livestock to effectively utilise deteriorating pastures, thus improving feed efficiency, maintenance of body weight and improving reproduction rates.

Dry loose licks can be formulated for all classes of livestock from paddock weaners to breeders depending on country and pasture types and the severity of the dry.

**Typical Daily Intake:** 80-200 grams /head/day

#### Typical Feed Analysis:

Min Total Protein	100%
Urea Equivalent	30%
Maximum Salt	30%
Min Phosphorus	30%
Min Calcium	4%
Min Sulphur	2%

Vitamins A, D & E; Essential Trace Minerals
